

410 Training Material

Control System & Solar Overview

This training material provides a clear overview of the RV control system and standard solar components used in Plant 410 units.

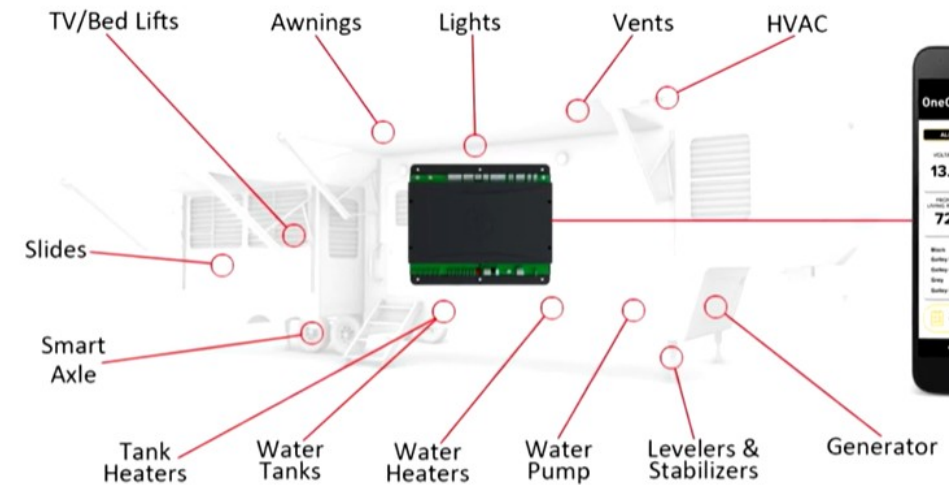

It is intended to help team members and dealers understand key features, standard equipment, customer benefits, and upgrade opportunities.

Our control system for your RV uses buttons, because we like buttons over touch screens. A great added feature is that you can download the OneControl App from Lippert, so you can monitor and control everything on your control system from your cell phone as well.

OneControl System

SOLAR SIMPLIFIED:

Every unit is built with the following:

- One 260 watt solar panel (A 2nd panel is available as a paid option)
- 30amp charge controller
- 1800 watt inverter
- Two 10 gauge wires run to the roof with 2 connection boots standard (This allows any customer to upgrade to a max of 7500 watts of solar components if they choose to purchase on their own ***NOTE: Must also upgrade 30amp charge controller and 1800watt inverter that is standard with every build if customer chooses to upgrade**)
